Museum Ecommerce Agents Project Briefing

Where the Discussion Started

You began by asking whether Copilot could connect directly to your GitHub account and help set up agentic workflows for Ecommerce Analytics, SEO, AEO, and Market Research.

We established that direct GitHub account access was not possible and that the safest approach would be to use the GitHub web interface while generating repository structure, files, workflows, and step-by-step guidance.

Repository created:

museum-ecommerce-agents

Repository Foundation Decisions

Repository Visibility

- Recommended: Public
- Easier portfolio showcase
- GitHub Actions support
- Security-sensitive information stored in GitHub Secrets

License

- MIT License

.gitignore Selection

- Python template
- Added custom entries for .env, data/raw, data/processed, reports, prompts/archive

Planned Repository Architecture

museum-ecommerce-agents/

.github/workflows/

agents/{analytics,seo,aeo,market_research,content}

data/{raw,processed}

docs

prompts

reports

scripts

README.md

.gitignore

LICENSE

Planned Agent Categories

Ecommerce Analytics Agent

- Sales trends

- Product performance
- Inventory movement
- Revenue analysis

SEO Agent
- Metadata audits
- Product description reviews
- Content recommendations

AEO Agent
- Optimize for Copilot
- ChatGPT
- Google AI Overviews
- Perplexity

Market Research Agent
- Industry trends
- Museum store activity
- Competitor monitoring
- Product opportunities

Content Agent
- Product descriptions
- Collection pages
- Artist bios
- FAQs

Security Discussion
- Do not share a GitHub PAT.
- Use GitHub Secrets.
- Use GitHub web interface.

Beginner-Friendly GitHub Approach
- Use only GitHub web interface.
- Avoid command-line tools initially.

Repository Implementation Completed

Core files:
- README.md
- LICENSE
- .gitignore

Folders:

- agents
- data
- docs
- prompts
- reports
- scripts
- .github/workflows

First GitHub Action Created

Workflow:
.github/workflows/weekly-market-report.yml

Purpose:
- Create an automated market research report.
- Run manually or on a schedule.
- Commit generated reports.

Output:
reports/latest-report.md

Learning Objectives Achieved
- Repository automation
- GitHub Actions structure
- Scheduled jobs
- Automatic commits

Recommended Next Phase
Market Research Agent V1 producing:
- SEO Opportunities
- Trending Search Topics
- Competitor Observations
- Artist Trends
- Product Trends
- Recommended Actions

Current Stopping Point
Repository created and structured.
First GitHub Action designed.
Next task: Build Market Research Agent V1.
